Let's green protect

RECYCLE TODAY, FOR A
BETTER TOMORROW

Best of Natural

REclaps is a dream venture of entrepreneurs and has a clear vision of zero garbage State. We have extensive expertise and experience in solid waste management projects.

Creating & implementing Creative solutions for better waste management, while advocating best practices for sustaining resources

REclaps is a dream venture of entrepreneurs and has a clear vision of zero garbage State. We have extensive expertise and experience in solid waste management projects. Our Recent studies and research on escalating garbage issues at Panchayaths, blocks, municipalities, shops,merchants etc.. level led to think more about changes we need in methodologies in collection, disposal, segregation and recycling of different types of solid waste management systems. We have necessary infrastructure including machineries to recycle the solid waste scientifically and we carry out the project in compliance with relevant provisions of law in respect of the waste management.

A WORLD WITH A ZERO WASTE

01. OUR TRUST AREAS & PROJECTS

- ◆ Waste Auditing
- ◆ Commercial Waste Disposal
- ◆ Extended Producers Responsibility
- ◆ Products Destructions
- ◆ Zero Waste Events

02. WASTE AUDITING

Partner with clients to assess the quantum of waste generated in the clients site.

Proposing improvised, innovated solutions for better waste management, compliant with state and central government regulations.

We work with hotels, restaurants, hospitals and clinics, apartments, RWAs, industries, Coporate offices, Self-Government bodies.

03. COMMERCIAL WASTE DISPOSAL

Collect & Transport
Material Recovery facility
Recycler & End user

MARKET STATISTICS

The India waste management market is expected to grow at a CAGR of **7.05%**.

The Indian waste management market is growing at a healthy rate, owing to the enormous population density and the increased industrial activity generating humongous wastes, both hazardous and non-hazardous. Circular economy concept is relatively new to India, however, it is growing rapidly.

The waste management industry in India offers huge potential as only 30% of the 75% recyclable waste is recycled currently. Shortage of proper policies for the collection disposal, and recycling and the lack of efficient infrastructure are few of the many reasons leading to poor waste management in the country.

IMPACT OF THE PROJECT

50+ dignified
jobs created

10536 tons
recycled

15576 kg sustainably
processed

20000 tons
CO₂ saved
